WHAT'S THE ODDS?

#18

Non-dealer Hand Analysis
(including pegging)
Typical 1,000 hands

HOW TO INTERPRET THE CHART:

Scoring nine points is the most common non-dealer hand (105 times per 1,000, or 10.5%). What are the odds of holding the non-dealer scoreless? One out of a thousand. What are the odds of holding the non-dealer to four points or less? 6.9% (add 36+19+10+3+1=6.9%)

What are the odds of the non-dealer scoring at least twenty points? 3.4% (add 11+5+5+2+2+2+1+1+1+1=34 or 3.4%)

The odds of two samples of 1,000 being exactly the same are astronomical. But the percentages will form this basic configuration.
